

Organizational Mission Statement

ETCSafety™ is a subsidiary of Ergonomic Technologies Corporation (ETC). ETC has over 15 years of experience in occupational risk management. ETC provides services to hundreds of corporate clients in the U.S., Europe, and Asia, and US government agencies. Services range from occupational risk training, through workplace assessments and evaluations, including corporate programs and processes to product assessment and evaluations in our corporate laboratories. ETC has developed traditional risk management programs as a “solution” for reducing risk factors associated with workers’ compensation claims, production problems, and quality and efficiency problems for hundreds of companies and governmental agencies.

During the course of our travels, we at ETC have identified a void in qualified, experienced safety instructors and have made it our primary goal to fill this void by incorporating **ETCSafety™** in June 2008.

ETCSafety’s™ mission is prevention. We offer our clients the ability to be proactive by reducing work related injuries and fulfilling OSHA and other required and desired training courses. It takes industry-specific training and experience to understand the complex array of issues and factors that affect occupational safety and health. Fulfilling mandatory OSHA requirements doesn’t have to be difficult but will help decrease Workers’ Compensation claims and lost time while protecting and keeping your employee’s more productive.

Professional Safety Services

Backed by years of extensive field experience, **ETCSafety’s™** staff and affiliated specialists provide clients with a broad array of professional safety services, in multiple languages including:

- **Consultation and Technical Assistance** – **ETCSafety™** offers board-certified safety professionals – engaged in the prevention of accidents, incidents, and events that harm people, property, or the environment and include specialists in construction, health-care environmental and fire safety (as well as others) – we perform on-site assessments and surveys to help employers identify and eliminate workplace hazards.
- **Training** – **ETCSafety™** provides specialized training for managers, supervisors, staff and employees. Customized training can be developed to suit any need and be delivered in a variety of media including traditional classroom training, train-the-trainer, webinars, e-training, manuals video’s etc.
- **Policy Development** – **ETCSafety™** helps employers develop customized policies and procedures that provide built-in protection against regulatory fines and citations to keep their employees productive and healthy.

Consultation and Technical Assistance

Safety Consultation

ETCSafety™ certified consultants offer a variety of services and capabilities, tailored to the needs of each client, including:

- Safety compliance with Federal OSHA, Local City & State Regulations

Policy Development

OSHA requires that employers develop and make available specific safety and health policies and procedures. **ETC Safety™** will use the information obtained during discussions and/or site safety and health audit to identify needed safety and health written policies. **ETC Safety™** helps employers develop policies and procedures that provide built-in protection against regulatory fines and citations.

Summary

With a broad array of advanced degrees and professional certifications, **ETC Safety™** consultants are uniquely qualified to provide clients in all industries with safety services that will help create a safer, healthier work environment. Following any consultation, the employer receives a comprehensive report that outlines recommended corrective actions, including any employee training that might be required.

The facts are simple: A safe workplace is more productive and cost efficient. Remember, Your Safety is our Business™
